Objectid	12
Description	Alternator field trip cabinet - Princetown
Image	 A photograph showing the interior of an open electrical cabinet. The top section features a complex arrangement of busbars and terminal blocks. Below this, the main compartment is divided into two sections. The left section contains a large, intricate mechanical assembly, possibly a relay or a switch, with various electrical components and wiring. The right section is a control panel with several analog meters, including a large circular gauge with a needle, and several smaller rectangular meters. To the right of the meters is a vertical strip of terminal blocks. The cabinet is painted a light yellow color, and the overall lighting is somewhat dim, typical of an indoor industrial setting.
Thumb	 A small, square thumbnail version of the main image, showing the same interior view of the electrical cabinet.
