Objectid	12
Description	Completed display, firewall and reduction gear, October 2009
Image	 A photograph of a large, complex industrial engine, likely a marine diesel engine, mounted on a metal base. The engine is white and silver, with various pipes, hoses, and electrical connections. A prominent green metal railing is in the foreground, partially obscuring the engine. The background shows a corrugated metal ceiling and wooden structural elements. The engine is connected to a large, circular, flanged component, possibly a reduction gear or a large valve. The overall setting appears to be an indoor industrial or museum space.
Thumb	 A small thumbnail version of the main image, showing the same industrial engine and green railing.
