Objectid	12
Description	Combustion chambers, October 2009
Image	 A large industrial engine, likely a diesel or gas engine, is shown in a workshop or laboratory setting. The engine features three prominent horizontal combustion chambers or cylinders, each with various pipes, valves, and sensors attached. A large, multi-bladed cooling fan is mounted on the right side of the engine. The engine is mounted on a blue-painted metal frame. The background shows a white brick wall and a corrugated metal ceiling.
Thumb	 A small thumbnail image of the engine, showing the same three horizontal combustion chambers and cooling fan as the main image.
