Objectid	4
Description	In-situ Kew 3
Image	 A photograph of a large, industrial diesel engine, likely a Northrop model, mounted in a facility. The engine is dark grey or black, showing signs of wear and rust. A large, horizontal cylindrical component, possibly a fuel tank or air filter, is mounted on top. The engine block features several circular access panels, some with handles. A complex arrangement of pipes, hoses, and electrical wiring is visible on the left side. The engine is mounted on a heavy base, and the background shows a concrete wall and ceiling.
