

Objectid	Description	Image	Thumb
6,000		 A large, complex industrial engine, possibly a gas turbine or jet engine, is shown inside a container. The engine is mounted on a custom-built wooden support structure. The support consists of a base made of wooden planks and several vertical wooden blocks that hold the engine in place. The engine itself has a large, dark, conical inlet on the left side and various pipes, wires, and mechanical components visible. The container's interior is visible, with a green door on the left and a white wall on the right. The engine is positioned on a metal track or platform at the bottom of the container.	 A small thumbnail image of the engine, showing it from a different angle or a closer view. It appears to be the same engine as the main image, mounted on a similar wooden support structure.
